In-line Pressure Sensor

Quick Start Guide

Product Overview

Preparation

- 1 Unpack the contents of the box.
- 2 This In-line Pressure sensor requires a LX Blue Node to function, available for purchase from [incyti.io](https://www.incyti.io). Follow the instructions provided with the Blue Node to complete setup and activation.

Installation and Mounting

- 3 To fit the sensor to an existing pressure gauge outlet, you will need a brass threaded tee-jointer with a female 1/4" BSP inlet.
- 4 Empty the tank/pipe of liquid, and assemble the in-line pressure sensor as pictured in *figure 1.1*.
- 5 For new pipe installations, you will need a tee jointer that fits the pipe to be monitored and an end cap that fits the tee jointer.
- 6 Empty the pipe to be monitored of liquid, and install the tee junction in the selected location.

- 7 Drill a 13mm hole in the top of the end cap and insert the pressure sensor as pictured in *figure 1.2*. Thread on the supplied nut and tighten to secure.
- 8 Screw the end cap to the top outlet of tee jointer, using plumbers tape if necessary.
- 9 Install the Blue Node according to its 'Quick Start Guide', and follow the instructions to plug the connector on the sensor into the Blue Node.
- 10 If possible, ensure that data is correctly reporting before leaving the site.

Protect cables from animals by purchasing sheathing from your local hardware store
