## Inversion Tower

Quick Start Guide

## Assembly Overview

**BNYPB10**  
Sensor  
Junction

**BN3LXA**  
Blue  
Node

**THR20**  
Temperature and  
Humidity Sensor

**THR10**  
Temperature and  
Humidity Sensor

## Preparation

- 1 This inversion tower requires the above components for installation, available to purchase from [incyt.io](http://incyt.io).
- 2 Unpack the contents of each box and check the component list to ensure that the kit is complete.
- 3 A 12-15 metre pole will be required to mount the components. LX recommends purchasing a telescopic pole similar to the **Hills Telescopic Telemast**.
- 4 LX recommends purchasing sheathing from your local hardware store to protect cables from animals.

## Installation and Mounting

Select an installation location, considering following:

- Install in an area indicative of where you would like to monitor.
- Ensure the installation site is free from obstructions that may interfere with airflow, such as trees or buildings.

- 5 Install the pole according its installation instructions, ensuring it is sturdy and level.
- 6 Mount THR20 (8.5M Cable) at the top of the pole as pictured on the right.
- 7 Mount THR10 (3M Cable) approximately 1-1.5 metres above the ground, as pictured on the right.
- 8 Attach the 2 X cables from the above sensors to the ports marked by orange and green rings on the Sensor Junction as per the Sensor Junction Quick Start Guide.

**IMPORTANT! DO NOT connect the Sensor Junction to the Blue Node until Step 10!**

- 9 Install the Blue Node approximately 2 meters above the ground according to its Quick Start Guide, and attach the Sensor Junction connector marked by a blue ring as pictured on the right.
- 10 Check to see if data is reporting correctly before leaving the site.
