

Water Level Sensor (Hydrostatic)

INCYT's Hydrostatic Water Level Sensor offers you accurate, real-time, water level data.

INCYT's submersible hydrostatic water level sensor is mainly used for monitoring water tank levels, but can be used for other liquids as well; both corrosive and non-corrosive. Water is probably the most important commodity for many businesses such as farms, off-grid accommodation operators and many more. Running out of water can be costly and dangerous. With INCYT's hydrostatic water level sensor you now have an accurate way to monitor all your water tanks and receive alerts when tanks reach a set level. You no longer need to drive across your operation to manually check water levels, and you can share this data with anyone you like through the INCYT cockpit.

- + Configure your dashboard the way you want to see your tank levels (% full, volume in litres, or depth in metres)
- + Configure low and high level alarms for different parameters such as usage, refill, depth in metres, volume in litres, and % capacity
- + Calibrate your devices in-app as required

-  **Built to Last**
-  **Plug 'n Play**
-  **XR Network**

Monitor your water tank levels 24/7

INCYT's hydrostatic water tank level sensor utilises INCYT's XR network, so you're not restricted to only using this in areas where you've got a cellphone signal - as long as your water tank is within reach of a INCYT base station, you're able to use the hydrostatic water level sensor!

Knowing your water tank level is critical to ensuring you detect leaks or other issues early, ensuring that you always have water available when you need it. With the combination of INCYT's XR network and hydrostatic water level sensor you know you're working with best-in-class equipment that will not let you down.

INCYT's water tank level data is available to you through the INCYT cockpit, which allows you to share this data with other users on your INCYT account. Configure alarms for different parameters such as usage, refill, depth in meter, volume in litres, and % capacity. Alarms can be sent via email, text or in-app notifications to yourself or anyone else you choose to send this alarm to.

Specifications

Housing material	316 stainless steel
Max. tank depth	4500mm
Waterproof rating	IP68
Working temperature	-40°C - +80°C
Accuracy	0.5% F.S. Standard
Power consumption	Ultra low
